

1

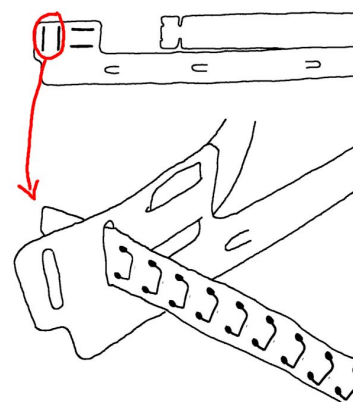

These are the three parts you'll need to construct each visor

2

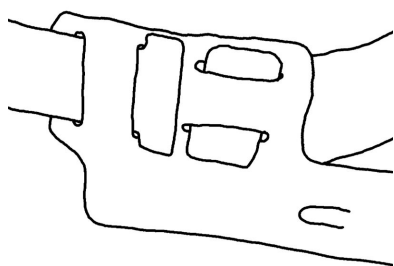

First, grab the end of the short arm of the headband, and gently bend the flaps to insert them into the slots pictured. **You'll need to wriggle them quite firmly to get them in.**

3

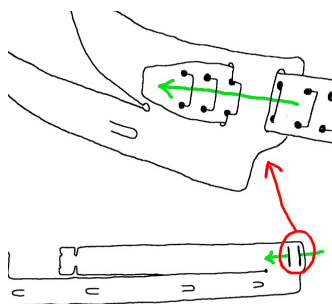

Next, insert the end of the strap into the indicated slots

4

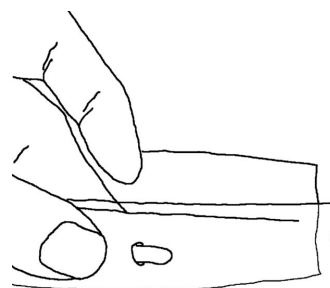

Pull the strap through the slots as far as it will go, to ensure it's well-anchored

5

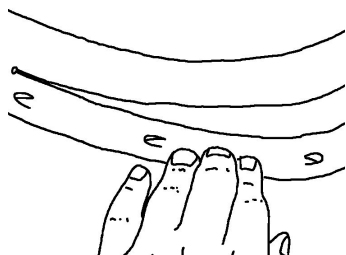

Next, insert the strap into the slots on the other side of the visor. Use the "teeth" to anchor it into place at the right length to encircle your head correctly

6

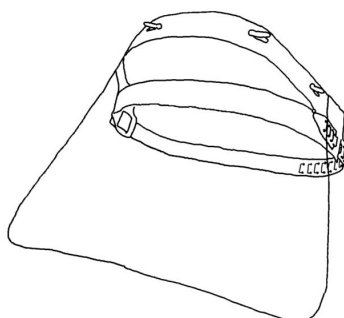

Attach the visor to the headband by matching the small flaps to the holes at the top of the visor. Start with the two central tabs

7

Run your hand along the inside of the headband to remove any bubbling from the visor and lock it in place

8
